## **CSI Lane Configurations**

## **6** CSI Lane Configurations

The DFM 36MX290-ML sensor board can be operated with 2 or 4 CSI lanes connected.

The following table shows the relationship between used CSI lanes and maximum frame rate:

| No of CSI Lanes | Bits Per Pixel | <b>Maximum Frame Rate at Full Resolution</b> |
|-----------------|----------------|--|
| 4               | 12             | 120  |
| 2               | 12             | 60   |

### 7 I2C Devices

There are multiple I2C devices on the DFM 36MX290-ML sensor board. The following table describes the parts and their I2C addresses:

| Address (7-bit) | Device      | Description  |
|-----------------|-------------|--------------|
| 0x1A            | IMX290LQR-C | Image Sensor |
| 0x50            | AT24C256C   | EEPROM       |
| 0x57            | AT24C02C    | EEPROM       |

### 8 Programming the Image Sensor

The data sheet for the IMX290LQR-C image sensor is not publicly available.

### 8.1 Input Clock

The CLK pin has to be connected to a clock source. The following table lists the ranges of clock frequencies that are supported by the image sensor:

| Minimum | Typical | Maximum | Unit |
|---------|---------|---------|------|
| 35.64   | 37.125  | 37.867  | Hz   |
| 71.28   | 74.25   | 75.735  | Hz   |

The driver provided by The Imaging Source assumes a CLK frequency of **37 MHz**. For quick integration with existing software, using this frequency is recommended.

#### 8.2 Power-up Sequence

| Delay | Action                     |
|-------|----------------------------|
| -     | Set RESET to Hi-Z          |
| -     | Set CAM_PWR to Hi-Z        |
| -     | Supply 5V to 5V_VDD        |
| -     | Supply sensor clock to CLK |
| 1 µs  | Set CAM_PWR to high        |
| 20 μs | Set RESET to high          |
| 11 ms | Write sensor registers     |
