## 1 Quick Facts

<b>General</b>	
Dynamic Range	12 bit
Resolution	3840x2160
Frame Rate at Full Resolution	30
Pixel Formats	12-Bit Monochrome 10-Bit Monochrome

<b>Optical Interface</b>	
Sensor Type	Sony IMX415-AAMR
Shutter Type	Rolling
Sensor Format	1/2.8 inch
Pixel Size	1.45 $\mu\text{m}$

<b>Electrical Interface</b>	
Interface	FPD-Link III via FAKRA connector
Supply voltage	10-27V
Current consumption	approx tbd mA @ 18 VDC

<b>Mechanical Data</b>	
Dimensions	H: 30 mm, W: 30 mm, L: 27.5 mm
Mass	12 g

<b>Adjustments</b>	
Shutter	15 $\mu\text{s}$ to 0.1 s
Gain	0 dB to 72 dB

<b>Environmental</b>	
Temperature (operating)	-5 °C to 45 °C
Temperature (storage)	-20 °C to 60 °C
Humidity (operating)	20 % to 80 % (non-condensing)
Humidity (storage)	20 % to 95 % (non-condensing)

## 2 Electrical Characteristics

### 2.1 Absolute Maximum Ratings

Item	Symbol	Pins	Min	Max	Unit
Supply voltage	V_COAX		-0.3	+27.0	V

### 2.2 Recommended Operating Conditions

Item	Symbol	Pins	Min	Typ	Max	Unit
Supply voltage	V_COAX		9.0	18.0	24.0	V

## 3 Dimensional Diagrams

### 3.1 DMM 36CX415-ML Board Camera

Scale: 2 : 1  
 Dimensions: mm  
 Tolerances: DIN ISO 2768-m  
 289-20-2-15-00

## 4 Spectral Characteristics

### 4.1 Spectral Sensitivity - IMX415-AAMR

## 5 I/O Connector

The DMM 36CX415-ML camera has a user GPIO I/O connector with the following pinout:

Pin	Name	Description
1	TRIGGER_IN_P	Opto-decoupled trigger input, anode of IR-LED
2	TRIGGER_IN_N	Opto-decoupled trigger input, cathode of IR-LED
3	GP_OUT	General purpose output, referenced to GND
4	GND	System ground

The trigger input is opto-decoupled. To drive the trigger input, a voltage must be applied to pins 1 and 2. Note: pin 1 is the positive input; pin 2 is the negative input.

**Important:** The sensor of DMM 36CX415-ML does not support trigger mode.

Pin 3 is a general-purpose output pin that can be controlled via software. The pin can be configured for TTL mode output or open drain output. LED2 indicates a possible overcurrent.

The recommended operating conditions of the user GPIO connector J3 are displayed in the following tables. CAUTION: Functional operation beyond the recommended operating conditions is not assumed.

Parameter	Min	Max
Trigger input voltage	3.15V	25.5V

Parameter	Min	Max
TTL-mode high voltage	-	250mA @ 4V
TTL-mode low voltage	-	250mA @ 0.05V

Parameter	Min	Max
Open-drain-mode voltage	-	24V
Open-drain-mode current	-	250mA

Please ensure that enough additional power is provided via the embedded system to operate the connected devices at the user GPIO connector (J3).

## 6 FPD-Link Serializer I/O Signals

The serializer chip DS90UB953-Q1 (Texas Instruments) has 4 GPIO pins. Their purpose is described in the following table:

Pin	Name	Dir	Description
17 (GPIO0)	NC	-	Not connected
18 (GPIO1)	TRIGGER_SER	I	External trigger signal from serializer board
27 (GPOI2)	NC	-	Not connected
28 (GPOI3)	RESERVED1_GPIO3	I/O	Reserved signal

The serializer's CLK\_OUT (19) pin is connected to the sensor's clock input. This means that the sensor's clock frequency is controlled through serializer PLL registers.

## 7 I2C I/O Expander Configuration

Various I/O functionalities of the camera are controlled through a I2C I/O Expander.

The TCA6408A part has the 7-bit I2C-address 0x20. The table below depicts which signals can be controlled through this expander:

I/O Pin	Name	Dir	Description
P0	CAM_PWR	O	Enable CMOS sensor power supply 0: Sensor power disabled 1: Sensor power enabled
P1	RESET	O	CMOS sensor reset signal 0: Sensor is in reset state 1: Sensor is in operational state
P2	GPOUT_LEVEL	O	If GPOUT_SELECT = 0: --->0: LED1 off --->1: LED1 on If GPOUT_SELECT = 1: --->0: GPOUT is low/0 V --->1: GPOUT is tri-stated or high/+5V (depends on the setting of P3)
P3	GPOUT_PUSHPULL	O	GPOUT (PicoBlade) type selection 0: GPOUT is configured as open-drain-output 1: GPOUT is configured as TTL/push-pull-output
P4	GPOUT_SELECT	O	Function of GPOUT (PicoBlade) Pin 0: Not connected 1: GPOUT_LEVEL from serializer board
P5	RESERVED_5	O	Reserved
P6	RESERVED_6	O	Reserved
P7	RESERVED_7	O	Reserved

## 8 I2C Devices

There are multiple I2C devices on the DMM 36CX415-ML sensor board. The following table describes the parts and their I2C addresses:

Address (7-bit)	Device	Description
0x1A	IMX415-AAMR	Image Sensor
0x20	TCA6408A	I/O Expander
0x50	AT24C256C	EEPROM
0x57	AT24C02C	EEPROM

## 9 Status LEDs

There are two status LEDs on the serializer board:

Name	Color	Description
LED1	Green	Controlled through GPOUT_LEVEL on the I/O expander
LED2	Red	Indicates overcurrent flowing out of GP_OUT in TTL/push-pull mode.
