

4.14.3 Release Notes

Firmware 14.4.3 allows Pearl Nano users to dynamically scale the input source in the custom layout builder.

What changed in this release

The color range of the HDMI and SDI video inputs now includes black (0.0.0). As such, the color black (0.0.0) in the video signal is now accurately encoded as black instead of near-black.

Previous releases and features

This section lists features and updates introduced in previous product releases.

Release 4.14.2
